

Leading the Way in
Access & Fire Evacuation for All

ktp.ae

"We have worked with KTP for many years now and have found the quality of their products and continued support to be second to none. After 13 years we have recently upgraded our wireless pull cord bedroom alarm systems with KTP, which they originally supplied to assist with our accessibility requirements. We chose to work with KTP again as we have been more than happy with the quality of this product and its life span. It has given us excellent value for money and the peace of mind required for our guests."

**Thomas Turner - Chief of Engineering
Holiday Inn London - Kensington Forum**

"Over the last 14 years KTP have supplied and installed an extensive range of Access Equipment for Cadbury World. We chose their Market Leading Mains Microloop System to assist our hearing impaired visitors to enable them to enjoy the Cadbury World Experience to the full. We have always found the quality of KTP's products and services to be of the highest standard and we would be happy to recommend their services."

**Tim Gimbert - Cadbury World Operations Manager
Cadbury World**

About Us

Since 2003, KTP has been consulting on, designing, manufacturing and supplying Access & Fire Safety Systems specifically designed to assist organisations in becoming accessible for all, by providing solutions to ensure the protection and inclusion of disabled and vulnerable people. We have a long and excellent track record working with Hotel Groups, Retailers, Banks and Blue Chip companies and a wide variety of public institutions including Universities, Schools, Colleges and Councils, priding ourselves on our exceptional customer service.

We recognise that Fire Safety and Access challenges vary greatly across businesses and locations. At KTP we provide tailor made solutions to suit each individual businesses specific requirements, ensuring full Accessibility, Fire Protection and Life Safety for all of our valued clients. Whatever the application, whatever the demands, KTP will ensure your needs are met with the most technologically advanced systems available and the most competitive, affordable and proactive level of service.

Induction Loops

KTP Microloop is our market leading Induction Loop System and is perfect for use at any reception area or payment point. It has been specifically designed to be easy to self-install and has very low power consumption.

It is currently being used in many businesses including Retail Outlets, Hotels, Leisure Facilities, Theme Parks, Council Buildings and Financial Institutions.

Our Microloop assists organisations with their responsibility to comply with the Dubai Universal Design Code.

PORTABLE ASSISTIVE HEARING SYSTEM

Hearing aid wearers face a real challenge understanding the speaker clearly amongst surrounding background noises. This is because hearing aids are unable to focus on a specific sound due to the way they pick up and amplify all of the other sounds present in the room.

The KTP Multipack System addresses the needs of multiple hearing aid wearers in a classroom, conference hall or meeting room setting, providing them with front row sound levels and real clarity from the speaker, irrespective of where they are seated.

PASSENGER HEARING INDUCTION LOOPS (PVIL)

The KTP Passenger Vehicle Induction Loop (PVIL) is a specially designed low power induction loop system to aid the hard of hearing. Independent research has shown that the use of induction loop systems makes conversations with hearing aid wearers easier and more relaxed.

As around 1 in 7 of your passengers or staff will have some form of hearing disability, it is now a requirement for all Buses, Coaches and Taxis to provide this facility under the Dubai Universal Design Code.

Fire SMS

Fire SMS is a fire safety product that alerts deaf or hard of hearing people and key fire safety personnel, that the fire alarm has been activated in a public place, such as a college, university, supermarket, shopping centre, hotel or library, enabling safe exit from the building.

It helps service providers and employers comply with the Dubai Universal Design Code. This also allows deaf and hard of hearing people freedom to move around buildings without the worry of missing an emergency.

NIGHT TIME USE

Fire SMS comes with a night time base unit which flashes in the event of a fire and a vibrating pillow pad which is connected to the base unit. When the Fire Alarm goes off a text is automatically sent to the mobile phone resting in the base unit, which in turn activates and flashes the base unit and vibrating pillow pad to alert the user the fire alarm is sounding and they should exit the building. This is especially useful in Hotels, Student Accommodation and anywhere where there is sleeping risk.

Wireless Refuge Communication System

Unlike other wireless refuge systems available, our KT5000 system has full duplex speech capability and uses GSM technology, overcoming any range and licensing issues encountered using private mobile radio.

Our System assists service providers with their obligations under the Dubai Universal Design Code to provide a safe means of refuge for disabled persons in the event of a fire or emergency as the refuge area must have a dedicated communication system.

Wireless Pull Cord Alarm System for Accessible Bedrooms & Toilets

The KTP Long-Range Wireless Pull Cord Alarm system has been specifically designed to ensure that in an emergency situation when the pull cord is activated the alarm will be responded to promptly. This is due to the fact that unlike smaller localised alarms, which have historically been fitted, the alarm is sent back to a main central point, i.e. reception area or manned security desk.

Purpose built, or existing accessible bedrooms and toilets are fitted with distress alarm pull cord switches. Should a pull cord switch be activated, a radio signal will be sent to the receiver positioned in reception, or other designated areas.
